

Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claims 1-18 (Canceled)

Claim 19 (Withdrawn): A method for producing a clip-on fastening system in which a fastening element (2) that functions as the base part of the clip-on fastening system is connected in a non-positive manner to a substrate (1), said fastening element providing a detachable clip-on fastening of the substrate (1) to a component (4), in particular a gasket, which is provided with a clip area (5), whereby the fastening element has a cross-sectional shape corresponding to the clip area (5) of the component (4), wherein a fastening element (2) already prefabricated and manufactured as a hardened continuous profile using a hard material in an extrusion process is glued to the substrate (1), and whereby the continuous profile is pressed against the substrate (1) with a pressure roller while gluing it to the substrate, and the component (4) is clipped with the clip

area (5) onto the finished fastening element (2), and a material having a shore D hardness of at least 40 is used.

Claim 20 (Withdrawn): The method according to Claim 19, wherein the hardened continuous profile is produced in-line with the process step of gluing the fastening element (2) to the substrate.

Claim 21 (Withdrawn): The method according to Claim 19, wherein the continuous profile is wound up onto a roll before glue application and is unwound from the roll for the purpose of glue application.

Claim 22 (Withdrawn): The method according to Claim 19, wherein a double-sided adhesive tape (3) is applied to the underside of the continuous profile.

Claim 23 (Withdrawn): The method according to Claim 19, wherein an adhesive is applied to the underside of the continuous profile.

Claim 24 (Withdrawn): The method according to Claim 19, wherein an adhesive is applied to the underside of the continuous profile and to the substrate.

Claim 25 (Withdrawn): The method according to Claim 19, wherein shortly before bringing the continuous profile in contact with the substrate, it is heated on the surface that is to be glued.

Claim 26 (Withdrawn) The method according to Claim 19, wherein a thermoplastic material is used as the material for the fastening element (2).

Claim 27 (Withdrawn): The method according to Claim 19, wherein a thermoplastic elastomer is used as the material for the fastening element (2).

Claim 28 (Withdrawn): The method according to Claim 19, wherein polyurethane is used as the material for the fastening element (2).

Claim 29 (Withdrawn): The method according to Claim 19, wherein a material that is also hard is used as the material for the clip area (5).

Claim 30 (Withdrawn): The method according to Claim 19, wherein a material having a hardness of at least 40 Shore D, preferably 45 Shore D is used.

Claim 31 (Withdrawn): The method according to Claim 19, wherein the component (4) is also prefabricated as a continuous profile.

Claim 32 (Withdrawn): The method according to Claim 19, wherein the application of the fastening element (2) to the substrate (1) and gluing it to the substrate (1) and/or clipping the component (4) onto the fastening element (2) is/are performed automatically by a robot.

Claim 33 (Withdrawn): The method according to Claim 19, wherein the fastening element (2) is produced with a mushroom-shaped cross section.

Claim 34 (Withdrawn): The method according to Claim 19, wherein the clip area (5) of the component (4) is produced with a mushroom-shaped cross section.

Claim 35 (Canceled)

Claim 36 (New): A clip-on fastening system comprising:

a) a component having a clip area; and

b) a prefabricated, extruded fastening element comprising a hardened continuous profile having a hardness of at least approximately 40 Shore D, said fastening element being connected to a substrate in a force-fitting manner and pressed against said substrate with a pressure roller while gluing said fastening element to said substrate to form a finished fastening element, said fastening element having a cross-sectional shape corresponding to said clip area;

wherein said fastening element functions as a base part of the clip-on fastening system and detachably fastens said substrate to said component when said component is clipped onto said finished fastening element.

Claim 37 (New): The clip-on fastening system according to claim 36, wherein said component comprises a gasket.
